NOTE:

Emergency lumens are calculated based on efficacy in the MID-LUMEN range (4000K). The value is adjustable through the EPR range shown above. For maximum efficiency, EPR should be set at the minimum level for compliance with NFPA Life Safety Code, based on photometric data for the fixture when installed.

¹ Emergency Power Rating (FACTORY ADJUSTABLE)

² Nominal output at 4000K

³ Maximum available Power in Emergency.

To calculate lumen output within the EPR range given:

$$\text{Lumens} = \text{EPR (watts)} \times \text{Luminaire Efficacy (Lm/watt)}$$
